

E-Transit Completes New Toll Collection System for the Gasparilla Island Bridge Authority

Bridgeport, PA -- December 31, 2010

E-Transit, Inc. (www.etransit.us) has completed a fully customized, state-of-the-art toll collection system for the Gasparilla Island Bridge Authority (GIBA) in Southwest Florida.

This system combines new manual and electronic toll collection (ETC) technologies with exiting legacy payment devices. Included in the system are new lane equipment, data networks, servers, touch-screen toll terminals, barcode readers, revenue and traffic management applications, ETC Customer Service Center system, and E-Transit's ITV-3000 digital video based toll audit system.

The system is an early adopter of the latest EPC Gen 2 RFID technology, and offers GIBA's customers a choice of either permanent "sticker", or portable "hang-tag" based ETC toll tags. Unlike traditional ETC toll tags and readers, EPC Gen 2 based devices are truly interoperable across devices from dozens of manufacturers.

About E-Transit:

E-Transit is a leader in information and control systems for the transportation, ports, and security industries. Our team includes experienced systems professionals who provide consulting, hardware/software design, and system integration services for intelligent transportation, security, toll and revenue collection, point of sale, industrial control, and auditing applications. We use off-the-shelf components, standardized communication protocols, open computing systems, and conservative design practices.

The Company has ongoing projects and installations in the USA, and abroad. The company E- was founded in 2000 and operates from offices in Bridgeport, Pennsylvania (approximately 20 miles from Philadelphia).
